Adnan Ali

Full-Stack AI Developer | LLMs, RAG, AI Agents | React, Node.js, Python | AWS, Docker, Kubernetes
Düsseldorf, North Rhine-Westphalia, Germany

Summary

Frontend Developer building AI-powered web applications with React, TypeScript, and LLM integration. 3+ years delivering production-grade frontends for enterprise clients across manufacturing, healthcare, and energy sectors. I specialise in React/JavaScript component architecture, Redux state management, and performance optimisation. Recently I've been expanding into AI-driven interfaces integrating LLMs and RAG pipelines into web apps that solve real problems.. Some things I've shipped: a real-time sign language ↔ text/voice translation platform for inclusive communication, a secure UN climate treaty collaboration tool used by 195+ member nations, and an industrial IoT dashboard for remote machine monitoring across factory sites. On the infrastructure side I'm comfortable with Docker, Kubernetes, and Azure DevOps — enough to own the full journey from code to deployment. Based in Düsseldorf, working in German and English. Open to senior frontend and AI-integrated web application roles in Germany. Let's connect and create something meaningful together!

Experience

CGI

Fullstack Developer Consultant
November 2022 - Present (3 years 8 months)
Leinfelden-Echterdingen

Building enterprise-grade React/TypeScript frontends for clients across manufacturing, healthcare, and energy. Work spans the full delivery cycle — from architecture and component design to API integration, performance tuning, and cloud deployment via Azure DevOps.

Tellus — Industrial IoT Control Platform

React/Redux interface for real-time monitoring and remote control of industrial machines across multiple factory sites. Integrated live data streams for

predictive fault detection, reducing unplanned downtime. Stack: React, Redux, Kafka, Material UI, Docker, Azure DevOps.

UNFCCC Climate Treaty Platform

Built a secure document collaboration SPA for 195+ UN member nation delegations. Implemented MSAL OAuth 2.0/OpenID Connect flows with silent token renewal and integrated Microsoft Graph API to resolve Azure AD group memberships and SharePoint permissions dynamically at runtime. Stack: React.js, Node.js, Microsoft Graph API, MSAL, Docker.

AccessibilityGate — Sign Language Translation Platform

Real-time sign language ↔ text/voice translation system enabling communication between deaf/mute and hearing users in public-service environments. Containerised microservices architecture supporting 50+ concurrent sessions with sub-2s translation latency. Stack: React, Redux, Flask, Docker, Kubernetes, MySQL.

Asappz GmbH

Frontend Developer

February 2022 - September 2022 (8 months)

Aachen

Worked on a data-intensive real estate platform, owning the frontend component layer from build to documentation. Acted as the bridge between backend engineers and UX designers, keeping the component API contract clean across the full delivery cycle.

Built and documented a library of 20+ reusable React components in Storybook, cutting design-to-implementation time by ~40% and ensuring visual consistency across the platform. Integrated RESTful APIs to power interactive property dashboards — filtering, search, and real-time data views used daily by agents and buyers. Delivered features on a bi-weekly release cadence in a cross-functional agile team.

Stack: React, JavaScript, TypeScript, Storybook, REST APIs, SCSS, Agile/Scrum

Education

COMSATS Institute of Information and Technology

Bachelor's Degree, Mechanical Engineering · (2014 - 2018)

Punjab College of Sciences, Gujranwal

Faculty of Science, Pre-Engineering · (2011 - 2013)
